

**Audit on Vitrectomy for floaters:**

- 69 patients underwent vitrectomy for visually disabling floaters between 2003-2014.
- 53 combined Cataract & Vitrectomy, 16 had Vitrectomy only
- Small incision Sutureless Vitrectomy (23 or 25G) was performed in all cases.
- None of the patients experienced a postoperative retinal detachment or any other serious complication.
- Vision was stabilised or improved in all patients. Subjective improvement and complete elimination of floaters was achieved in all patients. One highly myopic patient lost 2 lines on the Snellen's chart after surgery.
